

Product Info:

SKYWALK pressed concrete pavers are made in a European Press using 450 tons of pressure which pushes out water and air from the paver. This creates an extremely dense, strong and long-lasting product that requires very little maintenance.

Routine Maintenance and Care:

- A. Remove and replace pavers, which are loose, chipped, broken, stained or otherwise damaged. Make sure edge restraints stay intact and are structurally sound.
- B. Remove any soiling from exposed paver surfaces, wash and scrub clean.
- C. Efflorescence is a naturally occurring white residue or stain that is on the surface of new concrete. The residue will dissipate naturally with time.
- D. Joints and drains should be kept clean to protect from water back up.
- E. Pavers may be cleaned using a pressure washer. Be sure not to place the hose nozzle too close to the paver as it can cause chipping.
- F. If pavers begin to rock due to building settling, use the hand tool to re-level the pavers.
- G. Pavers may be cleaned and sealed although we recommend waiting until the efflorescence has worked its way out of the paver prior to sealing.
