Skywalk Concrete Pavers Provide Many Benefits Including:

- Durable, long-lasting product
- Minimal maintenance required
- Beautiful, architectural style
- Lengthens roof membrane lifespan by stopping harmful UV rays
- Seamlessly integrates with green roof features and
- Roof components below pavers are easily accessible
- Utilizes previously unusable space

Why Use SkyJack Pedestals?

- They are the **safest, fastest and simplest** way to create a rooftop patio with a lifespan that will outlast the roof
- **Compatible with most flooring options**, including concrete pavers, wood tiles, porcelain, turf on grates and framed wood or composite decks
- **Create a level patio** on top of roofs with up to a 7% slope
- Skyjack pedestals rest on top of the roof without penetrating it to **protect the roofs waterproof integrity**
- They ensure uniform spacing between pavers to **allow water to flow unimpeded** to the drains below
- Smooth bottom ensures that rough concrete or wood materials **will not damage the roofing membrane**
- Can be installed to **accommodate the specific warranty** requirements of virtually any roofing system
- Pavers can be **quickly and easily removed** to access the roofing system for inspection, service and leak repair
- SkyJack Pedestal System helps to protect the roof from UV, hail and wind damage and can **double the life expectancy of the roof** beneath

Product Info:

SKYWALK pressed concrete pavers are made in a European Press using 450 tons of pressure which pushes out water and air from the paver. This creates an extremely dense, strong and long-lasting product that requires very little maintenance.

Routine Maintenance and Care:

- A. Remove and replace pavers, which are loose, chipped, broken, stained or otherwise damaged. Make sure edge restraints stay intact and are structurally sound.
- B. Remove any soiling from exposed paver surfaces, wash and scrub clean.
- C. Efflorescence is a naturally occurring white residue or stain that is on the surface of new concrete. The residue will dissipate naturally with time.
- D. Joints and drains should be kept clean to protect from water back up.
- E. Pavers may be cleaned using a pressure washer. Be sure not to place the hose nozzle too close to the paver as it can cause chipping.
- F. If pavers begin to rock due to building settling, use the hand tool to re-level the pavers.
- G. Pavers may be cleaned and sealed although we recommend waiting until the efflorescence has worked its way out of the paver prior to sealing.
